

B2B Complex Site Integration Made Easy

Challenge:

Large Fortune 500 company with JD Edwards system requires batch file feeds between fulfillment vendor and internal system.

Background:

Client is in the midst of JDEdwards upgrade and their internal IT support is limited. While IT originally stated EDI was preferred, they eventually decided they have no resources to allot to the project and provided a flat tab-delimited file.

Solution:

Using the client's tab-delimited file, we created a custom import that received orders from their JD Edwards system. After shipping is complete for the day, we upload a shipping confirmation file back to their JD Edwards system to close the loop. We also send a nightly inventory file, to keep the JD Edwards system inventory updated.
